

How to print from an Android phone or tablet

1. Open the document you'd like to print.

2. Open the menu, and select "Print."

This process will be different depending on the device, app, or filetype you're using. In general, try checking the top corners of the screen for the three lines or three dots to open the menu. In Google Docs and Drive, you can print documents by finding the file on the main menu and **pressing the three dots next to the file name**.

3. The print menu will open. You'll be able to **choose the number of copies, select the paper size, and change the orientation of the paper** as well as change a few other settings.

4. **Select a printer from the drop-down menu.** If your printer doesn't appear in the list, try checking your phone's WiFi or Bluetooth settings to make sure you're connected.

5. Select "print." Your document will be sent to your printer.
